

FOOD SAFETY MYTHBUSTERS

FOOD
SAFETY

MYTH: It's safe to thaw my frozen food on the kitchen counter because I'm going to cook it right away.

FACT: Food must be kept at a safe temperature during thawing. There are three safe ways to thaw food: (1) in the refrigerator, (2) in cold water, and (3) in the microwave. Food thawed in cold water or in the microwave should be cooked immediately.

5 Steps to FOOD SAFETY

1

Be Clean,
Be Healthy

Wash hand
when necessary

Do not work with
food if you are ill

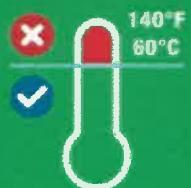

Never touch
ready-to-eat food
with bare hands

2

Keep It Cool,
Keep it Hot

Keep cold foods
at 41°F / 5°C
or below

Keep hot foods
at 140°F / 60°C
or above

3

Don't Cross-
Contaminate

Don't store
raw foods over
cooked or ready-
to-eat foods.

Never prepare
ready-to-eat foods
on the same surface
or with the same
utensils used to
prepare raw
animal proteins.

4

Wash, Rinse,
& Sanitize

1. Wash

2. Rinse

3. Sanitize

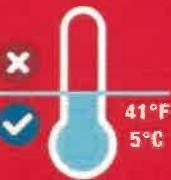

Property wash,
rinse and sanitize
all food contact
utensils and
equipment

5

Cook It &
Chill It

Cook food until
it reaches a
proper internal
temperature.

Rapidly cool food
to 41°C
or below

Six Tips To Help Prevent Falls

More than one in four people age 65 years or older fall each year, yet many falls can be prevented.

Talk with your health care provider about medication side effects

Make your home safer by using night lights, installing grab bars in the bathroom, and securing carpet to the floors

Stand up slowly to avoid dizziness

Do strength and balance exercises

Get your vision and hearing checked regularly

Use a cane or walker if you need more stability

Learn more about reducing your risk of falling at www.nia.nih.gov/falls-prevention.

What To Know About High Blood Pressure as You Age

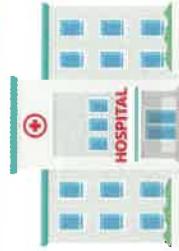

Points to remember:

The chance of having high blood pressure increases as you age.

Most people with high blood pressure don't have signs or symptoms.

Serious health problems can develop if high blood pressure is left untreated.

What you can do:

Get your blood pressure checked frequently.

Eat a healthy diet and exercise regularly.

Ask your doctor if you need medication to manage your blood pressure.

Learn more about high blood pressure and older adults at www.nia.nih.gov/high-blood-pressure.

CAZADORES DE MITOS SOBRE SEGURIDAD ALIMENTICIA

MITO: Es seguro descongelar mi comida congelada en el mostrador de la cocina porque la voy a cocinar de inmediato.

REALIDAD: Nunca descongele los alimentos a temperatura ambiente. Las bacterias pueden multiplicarse rápidamente si se dejan a temperatura ambiente o en la "zona de peligro" entre 40°F y 140°F. Los alimentos deben mantenerse a una temperatura segura durante la descongelación. Hay tres formas seguras de descongelar alimentos:

- (1) en el refrigerador,
- (2) en agua fría
- y (3) en el microondas. Los alimentos descongelados en agua fría o en el microondas deben cocinarse inmediatamente.
